

THE POWER BEHIND THE POWER

EDF Energy, one of the largest energy companies in the UK, is experiencing the benefits of back up power through an alliance with MEMS Power Generation.

Since the year 2000, MEMS Power Generation, a leading supplier of back up power solutions, has been delivering a 24 hour service for fault restoration and planned maintenance outages for EDF Energy.

“BEFORE WE HAD MEMS ON BOARD WE RELIED HEAVILY ON OUR IN-HOUSE GENERATOR FLEET. AS BACK UP POWER IS NOT PART OF OUR CORE BUSINESSES WE REALISED THAT WE COULD BENEFIT FROM THE EXPERTISE AND QUALITY SERVICE THAT A COMPANY LIKE MEMS PROVIDES. HAVING A PROFESSIONAL, SPECIALIST SUPPLIER LIKE MEMS MEANS WE CAN CONCENTRATE ON OUR BUSINESS AND FOCUS ON SERVING OUR CUSTOMERS’ NEEDS.” SAID SIMON POLLEY, HEAD OF SUPPLY CHAIN FOR EDF ENERGY.

EDF Energy is the largest power distribution business in the UK. The company serves 7.8 million customers and – as the distribution licence holders for London, East of England and the South East – delivers power to over one quarter of the UK population.

As part of their contract MEMS provided EDF Energy with a number of generators during network refurbishment works. With the project

lasting many months MEMS also managed the entire resource including, re-fueling, cabling and field servicing.

Since 1978 MEMS Power Generation has provided back up and emergency power solutions to organisations across the UK. With a varied and established client base the company has increased in size and now owns and operates its own transport fleet of flat bed crane lorries and fuel tankers.

“Owning and operating our own modern transport fleets allows us to minimise disruption and maximise operating efficiency for EDF Energy. Our 24 hour control room and rapid response service is constantly in contact with EDF Energy engineers and guarantees EDF Energy a quick and effective response.” said Glen Jarvis, Managing Director of MEMS Power Generation.
